UG (NEP) 6th SEMESTER
COMPUTER APPLICATIONS

(Python Programming)

Course Code: CAP622I1

No. of Questions: 09 Session: June 2025 Date of Exam: 18-06-2025
Exam Roll No.: _____ Time: 2:00 Hours
Max. Marks: 75 Min. Marks: 27

NOTE: Attempt all questions from Section “A” and “B” and only two questions from Section “C”.

Section A: Short Answer Type Questions (8 × 1.5 = 12 Marks)

Answer all questions in a maximum of 20 words each.

i. What is an identifier? Give example.

ii. Difference between break and continue statement.

iii. What is the purpose of None Keyword in Python?

iv. What is an Arithmetic operator? Give example.

v. Mention the types of arguments in python.

vi. What is the difference between actual and formal argument?

vii. What is a string in python?

viii. What is dictionary in python?

Section B: Medium Answer Type Questions (4 × 7.5 = 30 Marks)

Answer all the four questions with internal choice in a maximum of 150 words each.

2. What is an operator? Explain relational and logical operators with examples.

OR

What is a flow control statement? Discuss if and if else statements with flow chart.

3. Define python lists? With a program explain the concept of Accessing Values in List, adding and deleting list elements.

OR

Write a python program to add n numbers accepted from the user.

4. What is a tuple in python? Explain with the help of example(s) Built-in tuple Functions.

OR

Difference between a for loop and a while loop in Python. Write a python program to demonstrate the use of while loop.

5. Explain sets in Python with syntax and examples for creation and basic set operations.

OR

Write a Python program to perform read and write operations on a file.

Section C: Long Answer Type Questions (2 × 16.5 = 33 Marks)

Answer only two questions in a maximum of 400 words each.

6. Explain primitive data types in python with examples. Write short notes on python identifiers and keywords.

7. What is a function? Explain the function arguments with example. With the help of python code illustrate for statement with Range function.

8. What is a selection statement? Explain if, elif and else with program code.

9. Write a python program to create a dictionary whose keys are month names and whose values are the number of days in the corresponding months.

For Question 9:

a. Add month name and number of days in the month.

b. Print all the keys in alphabetical order.

c. Print out all the months with 31 days.
