UG (NEP) 8th SEMESTER
COMPUTER APPLICATIONS: MOBILE APPLICATION DEVELOPMENT (CAP822J3)

Session: June 2026 No. of Questions: 09
Time Allowed: 2:00 Hours Max. Marks: 100 Min. Marks: 36

NOTE: Attempt all questions from Sections “A” and “B” and only two questions from Section “C”.

Section A: Short Answer Type Questions (8 × 2 = 16 Marks)

Answer all questions in a maximum of 20 words each.

i. List key Mobile Application Services.
ii. What is inheritance in Java?
iii. List the software required to build an Android application.
iv. What is the need for learning/developing an Android application?
v. What is the role of an Activity in an Android application?
vi. What is the purpose of the Android Manifest file?
vii. What is the purpose of a ScrollView in Android UI design?
viii. What is SQLite database used for in Android applications?

Section B: Medium Answer Type Questions (4 × 10 = 40 Marks)

Answer all four questions with internal choice in a maximum of 150 words each.

2. Describe the Mobile Application Development Lifecycle. Explain each phase briefly, and identify which phase involves the front-end and back-end design decisions.

OR

Explain how event handling works in Java. With the help of an example, describe how to handle a button-click event.

3. What is the Android SDK? List and explain the purpose of any three key components it provides to a developer building an Android application.

OR

State any four tools or software required to set up an Android development environment, and briefly mention the role of each.

4. Explain the difference between explicit and implicit intents in Android with suitable examples.

OR

Describe different methods of storing and retrieving data in Android applications.

5. Explain the use of different Android UI components such as TextView, ListView, GridView, and ImageView.

OR

Describe how layouts help in designing user interfaces in Android applications.

Section C: Long Answer Type Questions (2 × 22 = 44 Marks)

Answer only two questions in a maximum of 400 words each.

6. Differentiate between native and hybrid mobile applications. Give one example of each.
7. Describe the Android platform architecture and explain how each layer contributes to running an application.
8. Discuss Android application components in detail. Also explain the role of the Android Manifest file, permissions and intent filters.
9. Discuss the process of creating a database, establishing a connection, creating tables, and performing basic operations (inserting, updating, deleting, and retrieving data) with suitable examples.
